

SINGLE STREAM RECYCLING

Plastic Bottles

Glass Bottles

Metal Cans

Clean Paper

Plastic Containers Marked #1-7

Juice and Milk Containers

Please ensure your recyclables are
free of major food debris.

COMPOSTING

All Food Waste
including meat and dairy

Compostable Products

napkins

ecotainers

paper boxes

greenware cups

utensils

chopsticks

pizza boxes

food soiled paper

Loyola Dining products are compostable.

LANDFILL

Styrofoam

Plastic Bags

Unmarked Plastic

Chip Bags

Starbucks Cups

If composting is not available:

Paper Towels

Soiled Paper

For Electronic and Hazardous Waste
including batteries, fluorescent bulbs,
electronics, and toner cartridges
contact Environmental Health and
Safety at x1120 or EHS@loyola.edu

Loyola Recycles?

Yes! Loyola Recycles. With the help of Republic Waste Services diverts a portion of our waste stream to single stream recycling each week. Although our service provider collects and processes the materials, it's our community that does the actual recycling.

Each time you recycle, Loyola recycles. Thank you for pitching in!

Loyola Composts?

Yes! Loyola Composts. Composting is a process that diverts items such as food waste, plant matter and soiled paper from entering landfills. When these types of items are combined under the correct conditions they can be transformed into rich soil.

Compostable material is collected from kitchens and dining areas on campus and hauled biweekly. Our service provider, Waste Neutral, uses industrial scale composting techniques to process the material into rich organic soil. Each month we create compost, we accumulate credits that can be used to purchase the soil for planting on campus.
