What is a Pop-Up Class?

The purpose of a pop-up class is to provide specialized information in a format conducive to active group learning. Pop-up classes can be a great way to draw attention to specific programs on campus, or market new skills to students in a fun, creative way. Our librarians are here to help you set up a pop-up class of your own design!

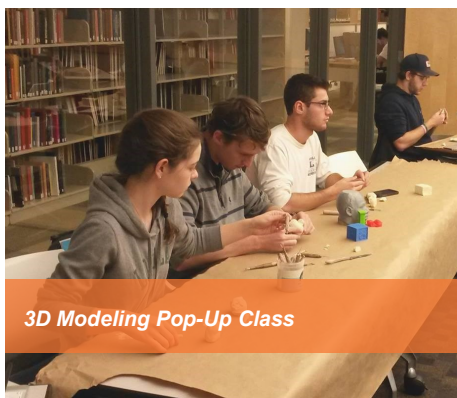

Previous Pop-Up Classes:

3D Modeling Class

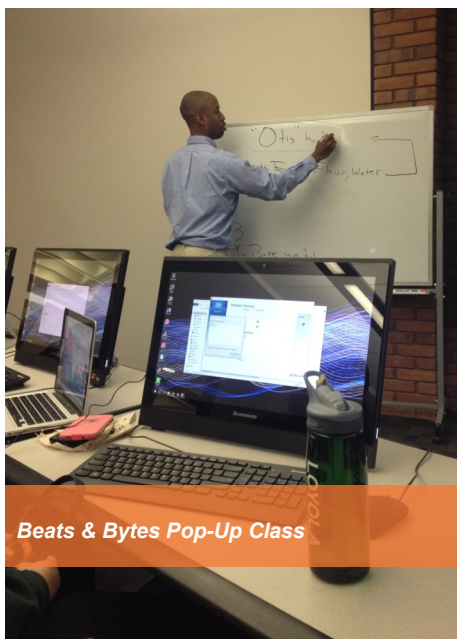

This class was sponsored by Loyola University Maryland's *Pathways to Innovation* grant and taught by Loyola's Fine Arts Department professor Billy Friebele. Students learned about the history and applications of 3D printing and scanning before creating their own models. The students got to try out various types of scanning devices on the models they made from clay. A great example of active learning!

Beats & Bytes Class

Led by Loyola professor David James, participants learned to use computer programming to create and manipulate music. Students were taught to use Audacity and Jython Music to create original compositions. LNDL had the software ready to go on the lab's computers!
