## Loyola Anywhere Apps

Did you know that when you are not on campus, you can still access all of the software that you need? The Applications Web part gives you access to additional software that you may or may not have installed on your desktop.

To access Anywhere Apps, log into Inside Loyola and click on the link under the Applications Web part.

When you click this link, you will be presented with the applications available to you on the right hand side of your screen. You'll find a number of helpful academic and administrative applications.

These applications can be launched over the Internet, even from home! In order to access the applications, you must install a small client application on your computer. Links to download the client and instructions are located on the Anywhere Apps page. Anywhere Apps are compatible with Microsoft Windows and Mac OS X.

The first time you are trying to use this Web part or if the credentials fail, the Web part displays a message that includes a link that asks you to provide your standard Loyola user name and password. These credentials will be used automatically the next time you try to use this feature.

Anywhere Apps offer native support for your Loyola network drives (G:\ & H:\), so you'll be able to access your data wherever you are. Your local drive will appear as C:\ in Anywhere Apps, so you're able to open and save documents to your computer if you need to. Your personal drive (G:\) is the recommended place to save your data so that it will be secure, backed up, and accessible wherever you need it.
