

HOW TO PROPERLY CLEAN & DISINFECT SURFACES

<https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/disinfecting-your-home.html>

CLEAN VISIBLY DIRTY SURFACES, FOLLOWED BY A DISINFECTANT

This is a best practice for prevention of COVID-19, and other viral type respiratory illnesses

WHEN CLEANING, PLEASE WEAR PERSONAL PROTECTIVE EQUIPMENT.

Gloves are required, and eye protection should be worn, if you are cleaning high touchpoints, or spraying a cleaner.

CAUTION MUST BE TAKEN TO COVER OR REMOVE FOOD WHEN CLEANING.

IT IS IMPORTANT, TO ENSURE THAT THE CHEMICAL USED, IS SPECIFIC FOR THE SURFACE THAT YOU ARE CLEANING.

Products that contain bleach, generally are not safe to use on soft surfaces, or carpet, without causing damage.

Never mix chemicals and wash your hands with soap and water for 20 seconds, immediately after taking off the gloves.

FOLLOW THE MANUFACTURER'S INSTRUCTIONS FOR:

Concentration (if the product is not ready to use), application, and contact time on the surface that you are cleaning.

The contact time ensures that the chemicals has had the time needed to kill germs.

IF SOMEONE IS SICK IN YOUR LIVING SPACE,

and a cleanup is needed to remove blood borne pathogens, EVS can be contacted via the ext. 5010, to perform deep cleaning, or carpet extraction.
