

# UNIVERSITY *of* MARYLAND CHILDREN'S HOSPITAL

**University of Maryland Children's Hospital (Baltimore)**

## **Neuropsychology Externship**

The University of Maryland Children's Hospital is currently accepting neuropsychology externship applications in the Department of Pediatrics. The neuropsychology externship program is a 12-month training experience in clinical pediatric neuropsychology. The position is located at the Baltimore campus within the University of Maryland School of Medicine.

The externship will emphasize brain-behavior relationships and the behavioral expression of brain dysfunction. Externs are involved in all aspects of the evaluation, including intakes, test administration, report-writing, case conceptualization, and feedback sessions. Externs will collaborate and consult with other divisions within the department including oncology, hematology, genetics, neurology, cardiology, and behavior and development. Additionally, students will also gain experience in collaborating with the school system and special education.

Neuropsychology students are a part of the University of Maryland School of Medicine. As such, they are invited to participate in weekly medical Grand Rounds and an interactive diagnostic dilemma conference. Students may have the opportunity to gain experience in research depending on their supervisor's current projects.

Students will be given meal vouchers to use in our food court and free parking on their externship days.

Interviews will be held in January, February, and March. Preference will be given to applicants with experience working with children.

Interested students can send a cover letter, CV, and two letters of recommendation to Joseph Cleary, Psy.D. at [jcleary@som.umaryland.edu](mailto:jcleary@som.umaryland.edu). A sample of written work may be requested as part of the application process. Please feel free to contact me with any questions you may have.

Joseph E. Cleary, Psy.D.  
Assistant Professor  
Licensed Psychologist, Pediatric Neuropsychologist  
Department of Psychiatry and Pediatrics
