

Transfer under the Associate of Science in Engineering (ASE) Program

The State of Maryland has developed a program to ease the process of transferring into computer and electrical engineering programs as a junior. A student who completes two years of study and is awarded a state-approved Associate of Science in Engineering (ASE) degree from a Maryland community college is eligible for transfer into Loyola's engineering program. The engineering courses taken as part of the ASE degree will be accepted by Loyola University as a block. Loyola also has an extensive set of liberal arts "core" requirements that have been specifically crafted to meet the learning aims of the University. These requirements are generally more extensive than the general education requirements at other institutions, and the transfer of non-engineering courses taken while earning the ASE degree will be evaluated on a case-by-case basis relative to meeting those requirements.
